

In the management of localized,  
nonprogressive Vitiligo

Rx **Melanin** <sup>TM</sup> Tablet  
Psoralen 10mg

Your patients' sunshine of hope..

**Used in adjunct with  
PUVA therapy<sup>1</sup>**

**Fast acting** - Increased  
photosensitivity 1 hour after  
the dose, and peak at about  
2 hours<sup>1</sup>

**Targeted Mechanism of action<sup>1</sup>**

- Immediate inhibition of DNA synthesis
- Subsequent cell proliferation is also inhibited

**Effective therapy<sup>2</sup> –**

Best results obtained with  
oral psoralen in conjunction  
with topical. Re-pigmentation  
developed in 60% of the  
patients within 6 to 12 weeks.
